Joint Press Release Month XX, 2022

HYDROGEN LIGHTHOUSE PROJECT BAD LAUCHSTÄDT: UNIPER ORDERS SUNFIRE ELECTROLYZER

- Within the Central German Chemical Triangle, energy company Uniper is implementing green hydrogen technologies on an industrial scale
- In Bad Lauchstädt, Sunfire will supply the core piece of a demonstration project: a 30 megawatt (MW) pressurized alkaline electrolyzer

Dresden / Düsseldorf, August 4, 2022

The Bad Lauchstädt energy park, one of the pioneering projects of the energy transition, is entering the execution phase. Uniper has ordered a 30 MW pressurized alkaline electrolyzer from the Dresden-based electrolysis company Sunfire. Its delivery is scheduled for 2024.

The project will realize the production, transport, storage, and economic use of green hydrogen on an industrial scale in Saxony-Anhalt, showcasing: new solutions for the future energy infrastructure. Together with its project partners, Uniper is helping to create value and jobs in the region affected by structural change.

Sunfire CEO Nils Aldag says: "With this significant new order, we are making an important contribution to the successful ramp-up of the hydrogen economy as well as to the transformation of the chemical industry in Germany. We are happy to partner with Uniper to further scale up hydrogen production."

The hydrogen project is not only unique for the Central German region – it is also an important step for ramping up the hydrogen economy throughout Europe. "The Bad Lauchstädt energy park covers the entire value chain including the production, transport, storage, distribution and use of green hydrogen. With Sunfire, we have found the ideal partner for realizing the central pillar of the project. Together, we will drive forward the local energy transition," **says Dr. Axel Wietfeld, CEO Hydrogen at Uniper**. Furthermore, green hydrogen is a promising solution for ensuring a future energy supply that is independent of Russian gas imports.

Sunfire's 30 MW electrolysis plant is currently one of the largest planned systems of its kind. At the energy park in Bad Lauchstädt, the electrolyzer will produce green hydrogen with renewable electricity from a nearby wind farm. In a second phase of the project, the hydrogen produced can be temporarily stored in a specially equipped salt cavern. Afterwards, it will be fed into the local chemical industries' hydrogen network via a repurposed gas pipeline. In the future, it will also be used in urban mobility solutions, for example in hydrogen powered buses.

Sunfire has already proven its high-performing pressurized alkaline technology in numerous projects. With its electrolysis solutions, Sunfire helps industrial companies and utilities to save fossil fuels and CO_2 emissions in the long term. To meet the high demand in the market, the Dresden-based company is currently industrializing its electrolyzer production. Just recently, Sunfire received a triple-digit million funding from the federal government and the EU as part of the <u>"Important Projects of Common European Interest" (IPCEI)</u> to scale its hydrogen technologies.

About Sunfire

Sunfire GmbH is a global leader in the production of industrial electrolyzers based on pressurized alkaline and solid oxide (SOEC) technologies. With its electrolysis solutions, Sunfire is addressing a key challenge of today's energy system: providing renewable hydrogen and Syngas as climate-neutral substitutes for fossil energy. Sunfire's innovative and proven electrolysis technology enables the transformation of carbon-intensive industries that are currently dependent on fossil-based oil, gas, or coal. The company employs more than 400 people located in Germany and Switzerland.

About Uniper

Uniper is a leading international energy company, has around 11,500 employees, and operates in more than 40 countries. The company plans for its power generation business in Europe to be carbon-neutral by 2035. Uniper's roughly 33 GW of installed generation capacity make it one of the world's largest electricity producers. The company's core activities include power generation in Europe and Russia as well as global energy trading and a broad gas portfolio, which makes Uniper one of Europe's leading gas companies. In addition, Uniper is a reliable partner for communities, municipal utilities, and industrial enterprises for planning and implementing innovative, lower-carbon solutions on their decarbonization journey. Uniper is a hydrogen pioneer, is active worldwide along the entire hydrogen value chain, and is conducting projects to make hydrogen a mainstay of the energy supply.

The company is based in Düsseldorf and is together with its main shareholder Fortum also Europe's thirdlargest producer of zero-carbon energy.
