

Power operations and maintenance strategy

Maximize the economic value of your assets with our **O&M Strategy Solutions**. An operations and maintenance (O&M) strategy is at the heart of bottom line improvements in operation and maintenance during the entire asset life cycle, based upon competence, tools and processes. Our experience of operating and maintaining high performing assets will support you in optimizing your existing O&M strategy or develop a new O&M strategy to suit your needs.

Our solutions

All asset owners have differing expectations and priorities, and are positioned in challenging markets with changing regulatory requirements. Everything we offer is designed to suit your demands.

During project development and commissioning, our solutions consider the future asset's O&M requirements during its development, setting up the systems and structures that every asset requires prior to the commercial operation phase.

During commercial operation our solutions help you to adapt to the changing market and regulatory environment, enabling you to react and adjust your operations and maintenance strategy in an optimal and flexible way.

This includes analysis of your O&M performance to identify and deliver possible improvements, delivery of specific O&M services and training services to ensure that your staff has the knowledge and skills to run and maintain your assets in a safe and profitable way

Our solutions will also help you to deliver improved maintenance overhauls and develop strategies for plant preservation activities for sites in, approaching, or leaving mothballed status.

Benefits

- Maximizes the economic value of your asset and portfolio by optimizing operational cost and capital expenditures whilst delivering promised revenues through expected technical performance.
- Delivers cost saving by reducing the complexity of the O&M management by optimizing structures and procedures that allow a more reactive approach to changes in the market.
- Risk management is delivered by applying a consistent and flexible O&M approach and strategy during the entire asset life cycle.
- Informed decision making is enabled by transparency around risks on a daily level.
